MEMORANDUM OF AGREEMENT FOR THE RECORD

SUBJECT: Delineation of Responsibilities between O/SI and O/RR
in the Field of Communications

The following agreement on delineation of responsibilities between O/SI and O/RR in the field of communications has been reached. It includes all necessary activities with respect to:

- a. Coordination of intelligence activities of other agencies
- b. Receiving information
- c. Maintaining files
- d. Initiating requirements
- e. Carrying out research and preparing reports

In general, the division follows the normal functional pattern of research, production, and use, and may be compared with the division of activities in the A.T.&T. system. The functions of O/SI correspond roughly to those of the Bell Telephone Laboratories, while the functions of O/RR [D/I] correspond to those of Western Electric and of O/RR [D/S] to those of the operating companies.

O/SI is concerned with scientific activity, which includes all research as well as prototype development up to the time the new or improved device goes into production or the technique goes into use. It also appraises the capabilities of the products of these activities for potential or actual application in the field.

~~SECRET~~

Hence, it must maintain familiarity with the technical characteristics and quality of types of equipment and systems in production and operation, for the purpose of comparative evaluation of future developments. It will be responsible for intelligence reporting regarding research and development in the fields of:

1. Organization, policies, and control
2. Research facilities and their use
3. Budgets for research
4. Personnel engaged in research and development
5. Research projects in process or in prospect
6. Actual and prospective results of research and their significance to the United States
7. Test facilities for items under development

It will also be responsible for intelligence regarding the technical characteristics and quality of types of equipment in being.

In addition, O/SI will be responsible for production on all phases of the special subject of communications jamming by foreign countries.

O/IR D/I is concerned with the production capabilities and intentions of foreign countries in the field of communications, civil, governmental, and military. Hence, O/IR D/I is responsible for intelligence regarding equipment in being or in production, with respect to:

1. Production organization and control
2. Plant locations and capacity
3. Manufacturing personnel (including engineering)

~~SECRET~~

4. Products, production details of plants, including orders and costs
5. Test facilities for items in production
6. Vulnerabilities, including critical materials
7. Output and shipments
8. Stockpiling

O/R [E/S] is concerned with the operational aspects and interrelations of all forms of foreign communications services and facilities, civil, governmental, and military, as they may affect the respective national economies and the policies, strengths, and vulnerabilities of the nations concerned. The scope of O/R [E/S] treatment is limited to such operational services and facilities projected, and in being. Hence, O/R [E/S] is responsible for intelligence regarding their:

1. Location
2. Operational capabilities and characteristics of the facilities
3. Functions (services performed - nature, volume, etc.)
4. Organizational setup and personnel
5. Control and operating policy
6. Vulnerabilities and strength
7. Contributions to the country's activities
8. Requirements from other segments of the economy for maintaining operation.
9. Plans for changes and additions to facilities

~~SECRET~~

10. Implications as to a country's intentions

O/SI and O/ER will closely coordinate their activities with respect to contacts with other intelligence agencies, and will cooperate on problems in the communications field which involves scientific, production, and operational aspects.

This agreement should not be considered as a barrier to free contact, but rather as a general guide to facilitate and encourage complete coordination between the Offices.

For O/SI

For O/ER

ATTACHMENT II

D R A F T

The OSI/F representative proposed the following footnote against the word "communication" in the first paragraph of Attachment I:

"For the purposes of this paper, 'communications' includes wire and radio communications, but excludes navigation aids, missile guidance, radar and such special uses of the electromagnetic spectrum."

25X1A9a

The intention of this footnote on the part of [REDACTED] of P/C is to exclude the enumerated systems from this paper, leaving the question open for higher level consideration.
